Education

Northeastern University Boston, MA *Expected May 2028*
Master of Science in Cybersecurity
Relevant Coursework: Cybersecurity: Technologies, Threats, and Defenses; Decision Making for Critical Infrastructure

Kalinga Institute of Industrial Technology Bhubaneswar, India *2025*
Bachelor of Technology in Computer Science and Engineering

Experience

Tata Consultancy Services (TCS) Bhubaneswar, India *March 2025 - Sept. 2026*
Systems Engineer – Application Security Testing (Client: Experian) *July 2025 – Sept. 2026*

- Conducted authorized manual and automated security assessments across **20+ non-PCI and 10+ PCI applications**, testing web/API access controls, authentication, injection vulnerabilities, TLS configurations, security headers, and network exposure.
- Correlated Rapid7 scan results with manual testing and Burp Suite Active Scan to investigate discrepancies, validate findings, and identify vulnerability coverage gaps.
- Coordinated remediation validation and retested findings across **40+ PCI and non-PCI applications**, verifying fixes and documenting reproducible evidence, severity, impact, reproduction steps, and actionable remediation guidance.
- Reviewed security assessment reports for technical accuracy and reporting quality, met personal SLAs, and contributed to a team that achieved **100% customer satisfaction on three occasions**.

Security Testing Intern *March 2025 – April 2025*

- Assessed the Alto Bank application in the TestFire.net practice environment using Burp Suite and other security testing tools, documenting reproducible findings and supporting evidence.
- Researched NotPetya, analyzing its impact and cybersecurity implications, and presented the findings.
- Completed PortSwigger Web Security Academy labs and foundational training in vulnerability management and application security testing.

Technical Projects

ReconForges – Automated Reconnaissance Framework *March 2026*
Python, Nmap, Nuclei, Subfinder, Amass GitHub

- Developed a modular reconnaissance framework covering subdomain enumeration, live-host discovery, web crawling, port scanning, technology fingerprinting, and vulnerability scanning.
- Integrated Subfinder, Amass, httpx, Katana, Nmap, WhatWeb, and Nuclei into a unified workflow with scope controls, fallback methods, and structured JSON/HTML reporting.
- Tested the framework against OWASP Juice Shop and Hack The Box lab targets, manually reviewing scan results to assess finding validity.

Secure File Management System with Facial Recognition *April 2024*
Python, Flask, OpenCV, TensorFlow, SQLite GitHub

- Built a local file-protection system using AES-256 and Fernet encryption, with facial verification to control access to encrypted files.
- Implemented face-encoding verification and password fallback authentication using bcrypt hashes stored in SQLite; tested encryption and decryption workflows with 5–6 peers.

Technical Skills

Application & API Security: Web Application Security Testing, API Security Testing, Access Control, Authentication Testing, Vulnerability Assessment, Remediation Validation, Security Reporting
Security Tools & Reconnaissance: Burp Suite, Nmap, Nuclei, Rapid7, Postman, Subfinder, Amass, httpx, Katana, WhatWeb, Wireshark
Programming & Automation: Python, JavaScript, SQL, C/C++
Systems & Technologies: Linux, TCP/IP, Network Protocols, Git, ServiceNow, Flask, SQLite, OpenCV, TensorFlow, Keras

Certifications & Training

- INE eLearnSecurity Junior Penetration Tester (eJPT)
- Microsoft Certified: Security, Compliance, and Identity Fundamentals (SC-900)
- Hands-on Security Labs: TryHackMe (Top 15%, 46 rooms completed); Hack The Box (Ranked #4051, Season 11)
